I'm Sapir.

I'm Whorf.

Sapir-Whorf Hypothesis

The languages you speak
{determine | influence} the way
you think.

Sapir-Whorf Hypothesis

The languages you speak
~~{determine |~~ influence} the way
you think.

But what about the

JavaScripts

????????????????

Proposal: The programming languages we know **strongly influence** the way we think about programming.

Programming languages
can create and manipulate
the space, rather than just
describe it.

“Programming languages, because they were designed for the purpose of directing computers, offer important advantages as **tools of thought**. Not only are they universal..., but they are also **executable and unambiguous.**”

Kenneth Iverson, “Notation as a Tool of Thought”

(bit.ly/Iverson-NotationAsToolOfThought)

Blub Paradox

Some
programming languages
are more powerful than
others.

Paul Graham, “Beating the Averages”

(bit.ly/blub-paradox)

Blub Paradox

“Some programming languages are more powerful than others.”

Weak
language

Blub (Exceedingly
average)

Super strong
language!

Blub Paradox

“They're satisfied with whatever language they happen to use, because it dictates the way they think about programs.”

Paul Graham, “Beating the Averages”

(bit.ly/blub-paradox)

Blub Paradox

“I know this from my own experience, as a high school kid writing programs in Basic. That language didn't even support recursion... but I didn't miss it at the time. I thought in **Basic**.”

Paul Graham, “Beating the Averages”

(bit.ly/blub-paradox)

Scarred for life?

“It is practically impossible to teach good programming to students that have had a prior exposure to BASIC: as potential programmers they are **mentally mutilated beyond hope of regeneration.**”

-Dijkstra, “How do we tell truths that might hurt”

(<http://bit.ly/dijkstra-truths>)

MENTALLY MUTILATED

BEYOND HOPE?!?!11/?

memegenerator.net

We are only “constrained” by the constructs and idioms of the most powerful programming language we know.

1. We can learn more
(powerful) programming
languages and program in
the idiomatically.

Humans can learn.

iteration

Humans can learn.

iteration

list comprehension

Humans can learn.

iteration

list comprehension

map

2. We can implement the constructs of more powerful languages in other programming languages.

Code can make things.

“Sweet.js brings the hygienic macros of languages like Scheme and Rust to JavaScript. Macros allow you to sweeten the syntax of JavaScript and craft the language you’ve always wanted.”

The screenshot shows the GitHub repository page for `mozilla / sweet.js`. The repository is public and has 131 watchers, 2,141 stars, and 116 forks. It contains 1,102 commits, 8 branches, 17 releases, and 23 contributors. The main content area shows a merge pull request #316 from `natefaubion/macroclass-where` authored by `disnet` 4 days ago. The latest commit is `bc28a4244b`. The repository is described as "Sweeten your JavaScript. <http://sweetjs.org>". The right sidebar shows links to Code, Issues (45), Pull Requests (4), Wiki, and Pulse.

Repository description: Sweeten your JavaScript. <http://sweetjs.org>

Repository actions: Watch (131), Star (2,141), Fork (116).

Repository content: Merge pull request #316 from natefaubion/macroclass-where. disnet authored 4 days ago. latest commit bc28a4244b.

Repository files: `_layouts` (cleaning up, 8 months ago), `bin` (updating the build, 10 months ago).

Repository sidebar: Code, Issues (45), Pull Requests (4), Wiki, Pulse.

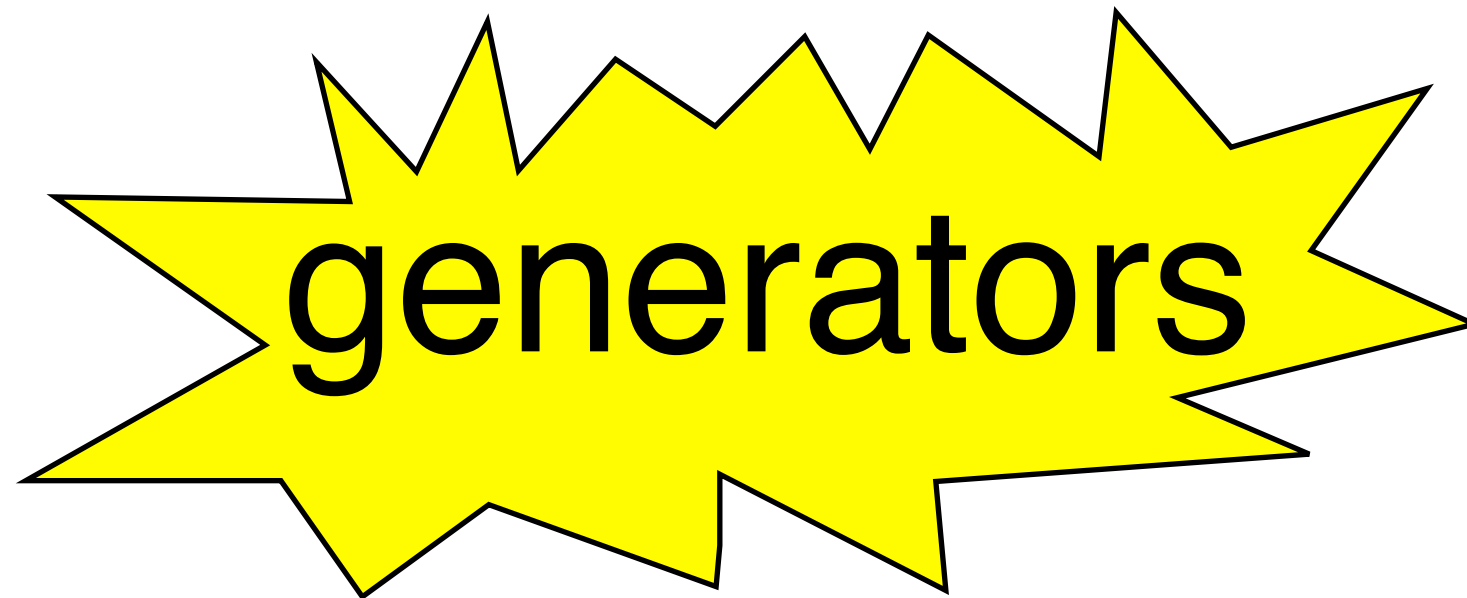

3. Programming languages themselves can change if we want them to.

Synthetic languages can be changed
